

Material processing and loading in one step

NATIONAL

EFFICIENT material flow is a key issue in any mining operation, power plant, bulk harbour and bulk material or storage area.

ALLU's one-step screening and loading method is a solution to reduce costs and boost efficiency in material processing.

With ALLU's Screener Crusher technology, existing loaders and excavators can be converted into effective primary and secondary crushing and screening machinery because ALLU Transformers screen waste, crush oversize soft rock materials and load raw material in one step.

ALLU Transformers help solve chute blockages and reduce the need for buffer storage areas and transportation of material heaps that are clogged due to moisture.

By removing problematic and damaging waste rock at the initial stage of the process ALLU also eliminates material double handling and help protect conveyor systems and primary material processing equipment.

ALLU Transformers are distributed to more than 30 countries and are now available across Australia.

ALLU Group, the manufacturer of ALLU equipment for more than 30 years, has recently partnered with RDW Group in an exclusive Australian distribution agreement.

RDW has appointed a dedicated Australian ALLU dealer network that has

ALLU Transformers ensure high production with lower operating costs by converting base machines into a mobile processing plant.

ready access to genuine parts and a wealth of operational knowledge and experience to ensure ALLU equipment continues to contribute to customers' profitability for

their entire working life.

The network includes Walkers Hammers in Victoria, Groundtec in NSW, QLD Rock Breakers (QRB) in QLD and the

Northern Territory, Total Rockbreaking Solutions (TRS) in WA, RAM Equipment in South Australia, and DLM Machinery in Tasmania.

TRANSFORMER.™

REDUCE COSTS AND BOOSTS EFFICIENCY IN ONE-STEP MATERIAL PROCESSING.

ALLU Transformers screen waste, crush oversize soft rock materials and other similar materials and load raw material in one step.
