

SIMEX ATTACHMENTS AND ALLU TRANSFORMERS AVAILABLE AUSTRALIA-WIDE

RDW Excavator Parts (RDW) announces a new national dealer network for Simex Attachments and ALLU Transformers.

Comprising of highly experienced and long-term excavator and skid steer attachment specialists, the Simex and ALLU dealer network share the commitment to providing a value-for-money solution using high quality premium products.

With the unique ALLU Transformers and Simex's technologically and innovative product range, customers in construction, earthmoving and demolition can significantly improve efficiency and safety of their operations and achieve a sustainable competitive advantage.

REDUCE WASTE AND INCREASE YOUR BOTTOM LINE

One of the main industry drivers behind the innovations for both products is their increasing need for recycling and more efficient material processing. Customers can enjoy immediate savings related to waste fees and reduction in transport costs when waste material can be processed or crushed into a material that can be reused onsite or taken to the tip utilising the full capacity of transport methods.

Simex attachments and ALLU Transformers help customers work faster and safer whether the task is trenching, milling, profiling, construction of underground utilities, tunnel excavation, waste material handling or pipeline backfilling.

Simex products are manufactured in Italy and ALLU Transformers in Finland representing European quality and reliability.

Simex and ALLU products are available and supported by a dedicated Australian dealer network with ready access to genuine parts and a wealth of operational knowledge and experience to ensure these innovative products continue to contribute to customer's profitability for their entire working life.
